ABSTRACT

A method and system of generation, organization and presentation of web pages or computer graphic user interfaces on computer, computer peripheral devices, electronic equipment, digital processing systems, and other information resources are disclosed. Modeling physical books, bookshelves and libraries, Visual Library comprises Visual Bookshelves, while Visual Bookshelf comprises Visual Book Covers that represent and link to Visual Books, and Visual Books comprise a set of Visual Navigation Tabs that represent and link a set of web pages or a set of graphic user interfaces. With look-and-feel, the linked Visual Library, Visual Bookshelves and Visual Books in hierarchical structures provide a friendly environment in which the documents, contents can be well organized and easily navigated.
